Allard AFO Warranty

Foot & Ankle Orthoses

The quantum leap in AFO technology

Introduced in 1997, ToeOFF®, the first Allard AFO, is now recognized as a quantum leap in AFO technology. Today hundreds of thousands of individuals with gait impairment now enjoy a higher quality of life, thanks to the stability and dynamic response provided when wearing one of our many carbon composite orthoses. More experience than any company in the industry and our commitment to providing only the highest quality product and customer service continue to position us as the world leader in carbon composite AFO technology. In pursuit of our drive to expand our "Support for Better Life", our product development team aggressively researches new materials, technology, and product designs that will extend the opportunity for improved gait and walking capacity to more and more individuals with lower extremity deficiencies.

Anterior Design

Allard AFOs extend up from the footplate onto the anterior surface of the leg to avoid pressure on the calf muscles and Achilles tendon. This allows for a dynamic floor reaction response to assist with propulsion and knee extension

Lateral Strut

The strut is placed on the lateral side of the footplate to create stability and function. It also allows for more functional use by bilateral users.

Light Weight

The composition of Carbon fiber, Fiberglass and Kevlar produces an extremely lightweight yet structurally superior design, which increases user compliance.

Open Heel

The open heel design allows the calcaneus to invert and evert to activate the natural biomechanical chain reaction to occur to achieve a closer to normal gait and eliminates uncomfortable pressure on the back of the leg or heel.

Comfortable

As the shin plate comes on the anterior surface of the leg, it provides a more comfortable design for the user.

Thin

The extreme thinness of the product makes it light and almost invisible under trousers.

Dynamic Footplate

The unique layup and the shape of the footplate contributes to a more dynamic, functional, and fluid gait pattern.

Fits in Shoe

The thinness of the footplate often avoids the need to increase the shoe size.

Graded Stability

To be able to accommodate different users' needs, the sizes and products are graded in both stability and dynamic response.

Indications & Contraindications

Indications

The Allard AFO for adults is designed to manage drop foot in conditions such as Stroke, Multiple Sclerosis, Post-Polio Syndrome, Muscular Dystrophy, Spinal Cord Injuries, Traumatic Brain Injuries, Guillian-Barre Syndrome, Charcot-Marie-Tooth, Myelomeningocele, Neuropathy or Cerebral Palsy. They can also support gait in conditions such as Posterior Tibialis Tendon Dysfunction (PTTD) and toe amputations. The BlueROCKER® range can be used for partial foot amputations, most proximal level is Chopart.

The paediatric AFOs are designed to support foot drop, gait deviations secondary to proprioceptive deficit (either unstable or low-tone gait), toe-walking with no midfoot collapse, low tone crouch gait in conditions such as Spina Bifida, Cerebral Palsy, Muscular Dystrophy and Myelomeningocele.

Contraindications

Allard Adult AFO should not be used when patients present with:

- Foot and /or leg ulcers
- Moderate to severe edema
- Moderate to severe foot deformities
- Severe spasticity
- Severe proximal deficits (e.g. Quadriceps spasticity,
- Genu Valgum or Varum, Genu Recurvatum)

Allard paediatric AFO should not be used when patients present with:

- Lacking ROM towards dorsiflexion (needs at least 5° dorsiflexion past neutral)
- Very rigid foot structure
- Quadriceps spasticity
- Fixed postural Pes Valgus or Pes Varus
- Excessive postural Genu Valgum, Genu Varum or Genu Recurvatum

Limitations

When Genu-recurvatum cannot be orthotically managed (such as with insoles or wedges), COMBO™ (a knee orthosis attachment for ToeOFF® and BlueROCKER®) or knee orthosis CROSS™ may be suitable solutions. Further information on COMBO™ is available in this catalogue and on our website.

Note

Professionals selecting, fitting and customizing these orthoses should exercise due professional judgment throughout and provide appropriate education to the patient or caregiver, to minimize the potential associated risk. These risks may include the contraindications identified above as well as risks associated with the unique attributes of the patient or the caregiver circumstances.

Product Selection Guide

Further information about intended use, indications and contraindications, and suggested modifications to assure optimum alignment and patient comfort can be found in the Professional Instructions packed together with each Allard AFO or can be downloaded from allardint.com. You can also view our 8-step videos on our website.

The scales on this page and chart on following page are provided as general guidelines only. Each individual, based on their unique deficits, gait patterns, proprioceptive response, and lifestyle needs, will respond differently to any orthotic device. This will influence the function and compliance results.

Allard AFO Product Rigidity Scale

Each Allard AFO offers different rigidity to provide the amount of support needed without over-bracing. The chart below shows the variance in the amount of support each AFO offers. For example, Ypsilon® Flow 1/2 would be considered for patients requiring minimum support while BlueROCKER® for those that require most support.

Allard AFO function scale

As an example, Ypsilon® FLOW 1/2 allows for the most ROM while BlueROCKER® offers the least. On the other hand, if you look at stability, BlueROCKER® offers the most whereas Ypsilon® FLOW 1/2 will provide the least stability.

	Ypsilon® Flow 1/2	ToeOFF® Flow 2 1/2	ToeOFF® 2 1/2 ToeOFF® 2.0	BlueROCKER® 2 1/2 BlueROCKER® 2.0
Allows Range Of Motion	●●●●○	●●●○	●●○○	●○○○

NAVIGAIT™

Navigait is an alternative for users with a mild foot drop. The amount of dorsiflexion is easily adjusted with an elastic coil to accommodate the user's specific needs.

Indications: Intended to support a foot when the ability to actively dorsiflex is reduced due to conditions such as Stroke, Multiple Sclerosis, Post Polio Syndrome.

Contraindications: Navigait should not be used by patients who present with spasticity or severe oedema.

ToeUP™ Textile ankle foot orthosis

ToeUP is a textile ankle foot orthosis designed for individuals with a mild form of foot drop. This orthosis features a low-profile textile ankle section that fastens above the malleoli (the bony prominence of the ankle). The ankle section is connected using an elastic cord with hooks, which are secured beneath the lacing or within the lacing holes on the shoe. This mechanism provides elevation for the forefoot during ambulation. You can adjust the level of elevation by altering the placement of the hooks or the strap on the ankle section. Additionally, there is a supplementary D-ring to fasten the straps together. ToeUP also offers an optional foot part component for indoor use. It is important to use ToeUP in conjunction with a sock.

Indications:

For patients experiencing mild symptoms of foot drop due to neuro- and/or muscular weakness in dorsiflexion.

Ypsilon®Flow ½

Ypsilon®Flow ½ was designed for your active patients or others who require less resistance or more flexibility. The footplate is engineered to allow the orthosis to adapt to and move with the lower leg with less resistance to ground reaction forces while the proximal ends of the “Y” provide fixation points, eliminating pressure on the tibia crest. Ypsilon®Flow 2½ has a heel height of only 7 mm. Ypsilon Flow ½ is supplied complete with tibial pad and strap.

For information on Indications and Contraindications please refer to page 7. More about fitting and product selection can be found in the Allard AFO Professional Instruction.

ToeOFF® 2½

The Foot Drop Orthosis ToeOFF® 2 ½ has the same dynamic functions and stability as ToeOFF® 2.0 with the exception that the 2 ½ has a lower heel height of 7 mm, to adapt to modern shoes. The toe lift is also lower which results in more space in the toe box. ToeOFF® 2 ½ has MikroFIX pre-applied to simplify the fitting process with the padding. The strap solution is the same as on 2.0, made from a durable and strong material. The straps can be applied on the interior or external side of the AFO.

For information on Indications and Contraindications please refer to page 7. More about fitting and product selection can be found in the Allard AFO Professional Instruction.

ToeOFF® Flow 2½

ToeOFF® Flow 2½ is the combination of our extensive experience and development in Carbon Composite AFO manufacturing, together with our Customers' request. ToeOFF® Flow 2½ has a new formula and other benefits:

- Lower heel height ~7 mm, easier to adapt to modern shoes.
- Lower toe lift
- More dynamic and ROM in A-P plane
- Lower, smoother profile of the footplate
- Patent Pending

ToeOFF® Flow 2½ has Mikrofix pre-applied which makes it faster to assemble your choice of SoftKIT™ 2.0, ComfortKIT™ 2.0 or CoverKIT™ 2.0. The closure straps are the same as ToeOFF® 2.0.

For information on Indications and Contraindications please refer to page 7. More about fitting and product selection can be found in the Allard AFO Professional Instruction.

Carbon Footplate

The Carbon Footplate serves the purpose of safeguarding the MTP (metatarsophalangeal) joints and the forefoot. It achieves this by restricting the range of motion, evenly distributing pressure in the forefoot, and aiding in the smooth transition of weight during ambulation. Furthermore, this footplate can be utilized to gradually restore mobility following a period of immobilization, typically in conjunction with a post-operative shoe or walker. It has the potential to enhance balance for individuals who have undergone toe amputation, specifically the fourth (IV) and/or fifth (V) toes. For optimal usage, it is essential to use an insole or custom foot orthotic in conjunction with the footplate.

Indications:

Hallux rigidus, Hallux limitus, stress fractures, and various other injuries or arthritic conditions in the forefoot and/or midfoot.

Item No.	Size	L/R	Width	Length

CoverKIT™

CoverKIT™ 2.0 combines our SoftKIT™ interface with a thin textile front to form a sleeve that slides over the anterior shell.

- Compatible with ToeOFF® 2.0, ToeOFF® Flow 2½, ToeOFF® 2½,
- BlueROCKER® 2.0 and BlueROCKER® 2½.
- Smooth, sleek appearance!
- Easy to apply – just pull the CoverKIT™ onto the leg like you would a leg warmer.
- Stretch up the textile front, slide on your compatible AFO and “cover up” the AFO by pulling down the textile front.
- Provides a smooth surface that extends all the way down the strut to the foot plate allowing pant legs to slide easily over the brace.
- If needed, the original straps, supplied with the AFO, can be used together with the CoverKIT™.

Item No.	Size	Calf Circumference
28765 0010	X-Small	31 - 34 cm
28765 0011	Small	34 - 37 cm
28765 0012	Medium	37 - 41 cm
28765 0013	Large	41 - 46 cm
28765 0014	X-Large	46 - 51 cm

KiddieFLOW™

Unlike KiddieGAIT®, KiddieFLOW™ is more flexible in the heel and toe area of the footplate and allows a greater range of motion.

KiddieFLOW™ is based on the same principles as our adult FLOW models and retains the same geometry as KiddieGAIT® and KiddieROCKER®. The orthosis supports the dorsiflexion of the foot in the swing phase, provides better control of foot positioning in the late swing phase, which in turn improves stability in the stance phase.

At the same time, the softer footplate provides easier roll off at the end of the stance phase. For a combination of increased A / P and M / L control, KiddieFLOW™, in addition to our other children's models, can also be combined with individual insoles or SMO.

Item No. Left	Item No. Right	Description	Size	Footplate length	Height

28891 1014	28891 2014	KiddieFLOW	XLarge	21 cm	31,5 cm

Allard UK also offers D-Ring Straps, please see page 29 for ordering details.

For information on Indications and Contraindications please refer to page 7. More about fitting and product selection can be found in the Allard AFO Professional Instruction.

KiddieGAIT®

KiddieGAIT® gives toddlers an orthosis that will allow their little feet to move in a more fluid and natural gait pattern. The AFO support the kids step thru Swing Phase and control the foot movement in several planes thru Stance phase. The anterior shell on the frontal side of lower leg also supports in other proximal problems, such as knee hyperextension or "Crouch gait" KiddieGAIT® is supposed to be used in combination with an custom made insole or SMO to control foot position.

KiddieROCKER®

KiddieROCKER® provides extra rigidity to enhance balance and posture control, especially for children with weak quadriceps muscles. KiddieROCKER® was developed for the children with more involved pathology than only footdrop.

- Carbon composite with anterior shell, lateral strut, and an engineered footplate with an open calcaneal design.
- Designed to allow integration of your custom foot orthotic to help control ground-up forces.
- Anterior shell to assist in management of proximal deficits by helping to manage either knee hyperextension or crouch gait.

KiddieGAIT® SoftSHELL™ YOUTH

The SoftSHELL for KiddieGAIT® comes in two different versions depending on size. The youth sizes have the outer SoftSHELL material combined with the SoftKIT Interface - all in one with two straps with D-rings. Available in a choice of two patterns: with hearts and a grey pattern with skulls. Patterns may change over time without notice.

Prefabricated SMO

A Surestep SMO is highly recommended to be used together with our KiddieFLOW, KiddieGAIT or KiddieROCKER to encourage heel-to-toe gait especially for patients with low tone and pronation. The Surestep Prefabricated SMO is designed to manage excessive mild to severe pronation associated with hypotonia. This SMO uses circumferential compression to stabilize the foot and ankle. The open heel allows more of the foot to “feel the floor”, which aids in sensory input and posture. For maximum function, this SMO should always be worn with suitable footwear.

Indications

Mild to severe pronation, hypotonia, triplanar instability in weight bearing, inability to stand independently, mild toe walking.

Contraindications

Hypertonia, spasticity, severe toe walking.

Weight limitations

Patients up to 22,5 kg.

SoftKIT™

Every Allard AFO (excluding Ypsilon Flow ½) should have a soft interface between the orthosis and tibial crest. We offer two solutions: SoftKIT™ and ComfortKIT™. We offer three types of SoftKIT™ which suit the various Allard AFO models and are available in black only.

- SoftKIT™ for ToeOFF® and BlueROCKER® Short, sized to suit the shorter strut and broader tibia plate and includes same components as SoftKIT™.
- SoftKIT™ 2.0, a more tapered interface for all adult Allard AFOs from version 2.0 onwards. This pack includes two tibia pads.
- SoftKIT™ for KiddieGAIT®/KiddeROCKER®, sized to fit baby and youth sizes and includes pre-cut MikroFIX™ tabs necessary to attach the SoftKIT™ to the AFO.

ComfortKIT™

ComfortKIT™ our premium interface for the Allard AFO. It is recommended for patients who require added cushioning and a more intimate fit due to the shape of the tibia, skin condition and activity level. We offer two versions of ComfortKIT™ which are available in black only:

- ComfortKIT™ 2.0, a more tapered interface, which is compatible with all adult Allard AFOs from version 2.0 onwards. The pack does not include MikroFIX™ tabs as these are pre-applied on later versions of all adult Allard AFOs.
- ComfortKIT™ for KiddieFLOW™/KiddieGAIT®/KiddeROCKER®, sized to fit youth sizes and includes pre-cut MikroFIX™ tabs necessary to attach the ComfortKIT™ to the AFO.

Item No. Black	Description	Size

Hip Orthoses

S.W.A.S.H.[®]

Increase Levels of Function

What makes SWASH[®] unique to other hip orthoses is that it offers controlled variable abduction. It is engineered with a complex series of angles to maintain good hip alignment as the uprights follow the pathways of motion of the femurs.

While standing or walking, SWASH[®] provides just enough abduction to prevent scissoring and medial femoral rotation. As the hips are flexed to assume the sitting position, it automatically further abducts the hips to create a tripod base for enhanced sitting stability and more upright posture.

The most visible benefits of the SWASH[®] are readily apparent by improvements in sitting and standing posture and stability, and for the ambulatory user, improvement in gait. However, perhaps the most important benefit the SWASH[®] offers is guidance for hip alignment.

With

Without

S.W.A.S.H.[®] STEADY

(Replaces previous SWASH Classic)

- Plastic pelvic section extends from L2/L3 to the coccyx, providing maximum torso support for candidates with flaccidity or very limited trunk control
- Single strap fixed front closure to secure torso support
- Increased posterior and side support
- "Childproof" thigh cuff closure
- 6mm diameter uprights for size 1, 8mm uprights for size 2, 3, 4

S.W.A.S.H.[®] GO

(Replaces previous SWASH Low Profile II)

- Anatomically shaped metal pelvic section rests over the pelvis and is secured in position by attaching to a small plastic reinforced abdominal pad
- Double strap front closure allows symmetrical application
- 8 mm diameter uprights in all sizes - extra strong for extra high tone
- Interchangeable thigh cuff sizes
- Overlap design thigh cuff closure for easy application and removal
- Contoured posterior joints reduce interference with posterior walkers and other standing/walking/sitting aids

Two options for upright selection

More abduction in sitting

Increased abduction offers maximum opportunity for muscle lengthening in the sitting position, and is also recommended when there is need to influence the trunk toward more spinal extension.

Less abduction in sitting

Reduced abduction better accommodates wheelchairs with narrow seat structures and is better tolerated by children with tight adductor muscles.

Measure:	Size	Sizes Available		Circumference	
		STEADY	GO	Adjustment Range	
SWASH® STEADY - At level of the natural waist for maximum trunk stability.	1	✓	✓	400-465mm	15 ¼-18 ¼in
	2	✓	✓	460-550mm	18-21 ¾in
	3	✓	✓	540-630mm	21 ¼-24 ¾in
	4	✓	✓	620-720mm	24 ½-28 ¾in
	5	N/A	✓	710-810mm	28-32in
	6	N/A	✓	800-900mm	31 ½-35 ½in
SWASH® GO - At the level of the ASIS. Ideal is to fit the orthosis at mid-pelvic girdle to obtain good pelvic stability.	1	✓	✓	210-250mm	8 ¼-9 ¾in
	2	✓	✓	250-290mm	9 ¾-11 ½in
	3	✓	✓	290-330mm	11 ½-13in
	4	✓	✓	330-380mm	13-15in
	5	✓	✓	380-440mm	15-17 ¼in
	6	✓	✓	440-500mm	17 ¼-19 ½in

Measure:	Size	Sizes Available		Circumference	
		STEADY	GO	Adjustment Range	
THIGH CUFFS Measure at distal thigh, just proximal to the condyles. Ideal is to fit the cuffs as distal as possible without creating pressure or interference in the popliteal area. However, pressure on the thorax, excessive spinal flexion, or discomfort due to hamstring tightness, may be relieved by moving the cuffs up 1 - 3 inches.	1	✓	✓	210-250mm	8 ¼-9 ¾in
	2	✓	✓	250-290mm	9 ¾-11 ½in
	3	✓	✓	290-330mm	11 ½-13in
	4	✓	✓	330-380mm	13-15in
	5	✓	✓	380-440mm	15-17 ¼in
	6	✓	✓	440-500mm	17 ¼-19 ½in

Measure:	Size	Upright Diameter		Waist to Mid-Patella	
		STEADY	GO		
UPRIGHTS Measure waist to mid-patella. At final fitting, should be shortened to level of distal thigh cuff padding. 115° = narrow sitting base 123° = wide sitting base	1	6mm	8mm	310mm	12 ¼in
	2	8mm	8mm	375mm	14 ¾in
	3	8mm	8mm	440mm	17 ¼in
	4	8mm	8mm	480mm	19in
	5	8mm	8mm	540mm	21 ¼in

Contracture Management

MultiMotion

The Next Generation

We would like to introduce to you the next generation of our MultiMotion dynamic corrective joints. First of all, there is its eye-catching, clean design and modern appearance. The expressive details make this hinge a worthy successor, but that's not all. Hidden from view, this dynamic joint houses a variety of new features which are accentuated, among other features, by the use of high-quality materials.

Our dynamic corrective joints are designed for the treatment of patients with limited joint mobility and provide safe, efficient and appropriate treatment of contractures due to neurological and orthopedic conditions. The corrective joint can be used in orthoses for all age groups.

The functionality of the MultiMotion corrective joint is based on the LLPS (Low Load Prolonged Stretch) principle. This process of gradual, precise and evenly applied tension promotes the growth of the shortened tissue and increases joint mobility. The application of a low but sustained corrective force lengthens the affected tissue, improving the range of motion of the joint. Treatment of the contracture can be done in both flexion or extension with the very same joint. The selection of these is easily adjusted by flipping the spring cassette from the red (Fig. 1) to the yellow (Fig. 2) side, or vice versa. The correct setting depends on the body side and the specific joint to which the joint is applied.

MultiMotion Joint - changing the direction of force

MultiMotion

Dynamic Corrective Joint

Intended use: treatment of dynamically correctable contractures

Neurological indications

- Apoplexy (CVA)
- Cerebral palsy
- Cranial Brain Trauma
- Dystrophy
- Multiple sclerosis
- Paresis
- Spina bifida

Contraindications

- Abnormal arthrokinematics
- Ankylosis
- Arthrodesis
- Fibrosis
- Ossification

Orthopedic indications

- Amputation
- Fracture
- Ligament rupture
- Post-op after placement of endoprotheses, etc.

Application

The corrective joint facilitates efficient treatment of dynamically correctable contractures according to the LLPS principle.

Product functionality

The corrective joint facilitates efficient treatment of dynamically correctable contractures according to the LLPS principle.

Features

- Torque output possible in flexion or extension
- Range of Motion: +95° to -95°
- Adjustable flexion and extension stops
- Locking and unlocking possible in virtually any position
- Torque Output Infinitely adjustable
- Adjustable 0 point
- Medial and lateral access to torque output set screw
- Material: steel/stainless steel, plastic

Benefits in achieving therapy goals

- Improvement/rehabilitation of joint mobility
- Secure and step-wise joint mobilization
- Elongating/mobilizing spastic musculature
- Strengthening the musculature
- Improvement of the resting position
- Prevention of cartilage damage and ulcers

MultiMotion

Components

MultiMotion joints are available in sizes medium and large. In addition, these components come in configurations with a modular bar adapter or with integrated bars and/or T-bar. In addition to an alignment unit, various types of joint bars are available as accessories for MultiMotion. In case of a bilateral application where a companion joint is preferred for the contralateral side, a selection can be made from the FreeMotion series of freely movable joints.

Corrective Joints with modular bar adapter

Treatment recommendation
Joint: wrist / elbow / hip / knee / ankle

- Features**
- Proximal and distal connection: modular bar adapter
 - Bar width connection: 12 mm (medium), 16 mm (large)
 - Adjustable flexion and extension stops

Size chart

Item number	Size	Bar width	Joint thickness	Offset T-bar	Overall length	Joint weight	Housing diameter	Maximum spring load
69152 0000	medium	12 mm	19 mm	-	124 mm	125 g	36 mm	4,1 Nm
69140 0000	large	16 mm	24 mm	-	144 mm	268 g	50 mm	8,4 Nm

Corrective Joints with modular bar adapter & T-Bar

Treatment recommendation
Joint: wrist / ankle

- Features**
- Proximal connection: modular bar adapter
 - Bar connection width: 12 mm (medium), 16 mm (large)
 - Distal connection: T-bar
 - T-bar length: 155 mm (medium), 185 mm (large)
 - Adjustable flexion and extension stops

Size chart

Item number	Size	Bar width	Joint thickness	Offset T-bar	Axis to bottom	Joint weight	Housing diameter	Maximum spring load
69159 0000	medium	12 mm	19 mm	10 mm	56 mm	154 g	36 mm	4,1 Nm
69147 0000	large	16 mm	24 mm	10 mm	73 mm	303 g	50 mm	8,4 Nm

Corrective Joints with integrated bars

Treatment recommendation
Joint: wrist / elbow / ankle

- Features**
- Proximal and distal: Integrated bars
 - Proximal and distal bar length: 270 mm
 - Adjustable flexion and extension stops

Size chart

Item number	Size	Bar width	Joint thickness	Offset T-bar	Overall length	Joint weight	Housing diameter	Maximum spring load

69165 0000	medium	150 mm	16 mm	3,2 mm	T-Bar

FreeMotion Free Movable Joints

FreeMotion represents a product series of single-axis free motion joints, suitable for individual orthopedic devices of the upper and lower extremity for children, adolescents and adults. The joint can be used individually, but is also an ideal companion joint in combination with the MultiMotion corrective joint.

Intended use: these free motion joints can be used as an individual joint or as a companion joint on the contra lateral side of the affected joint to improve the torsional rigidity of the orthosis.

Features

- Configurations:
- Proximal and distal modular bar adapter ⁽¹⁾
- Proximal bar adapter, distal with T-Bar ⁽²⁾
- Proximal integrated bar, distal with T-Bar ⁽³⁾
- Proximal and distal integrated bars ⁽⁴⁾
- Range of motion: +120° tot -120°
- Material: stainless steel

MultiMotion

Dynamic Hip Abduction System

Intended use: Treatment of correctable adduction contractures in the hip joint

Treatment recommendation: Joint: hip (paediatrics)

This system is assembled to individually made KAFO shells and features an infinitely adjustable rotation setting. This allows the leg to be positioned in a physiologically correct manner. The adductors are elongated by the gradually applied tension which stimulates the growth of the shortened tissue and increases joint mobility.

Indications

Diplegia, spastic. Hip joint subluxation, congenital. Tetraplegia, spastic. Triplegia, spastic.

Features

Infinitely adjustable abduction force

- Adjustable flexion and extension stops
- Infinitely adjustable rotation (-40° to +40°)
- Quick release for leg shells for
- Easy donning and doffing

Product functionality

Infinitely adjustable dynamic abduction of the hip joint
Limiting the adduction or abduction of the hip joint
Locking the hip abduction and adduction
Rotation setting of the hip

Benefits in achieving therapy goals

- Improvement/rehabilitation of joint mobility
- Secure and step-wise joint mobilization
- Elongating/mobilizing spastic musculature
- Strengthening the musculature
- Improvement of the resting position
- Prevention of cartilage damage and ulcers

Ordering information

The MultiMotion dynamic hip abduction system is always assembled by two orthotic components - the corrective system joint and the abduction bars - and combined with the KEVO leg shells, they represent the complete hip abduction orthosis. Both orthotic components are available in sizes medium and large and require to be ordered separately.

MultiStatic

Regression Joints

The MultiStatic Regression Joint enables fast and efficient static treatment of contractures primarily due to orthopaedic injuries or disease - utilizing HLBS* principles. The angle of the joint is set by an eccentric axis. This continuously adjustable static extension or flexion joint is used in orthoses for both children and adults.

Intended use: Static treatment of correctable contractures

* HLBS = High Load Brief Stretch

Benefits in achieving therapy objectives

- Range of motion: +120° tot -120°
- Improvement of the resting posture

Product function

- Continuous adjustable static Extension or Flexion of the joint

Features

- Easy angle adjustment due to optimally positioned joint axis
- Can be used in Flexion and Extension
- Range of motion from +120o to -120o
- Joint head and axle hardened
- Integrated bars
- Material: stainless steel

The MultiStatic regression joint is suitable for the static treatment of contractures that have a neurological or orthopaedic origin.

Neurological indications

- Apoplexie (CVA)
- Cerebral palsy
- Cranial Brain Trauma
- Dystrophy
- Multiple sclerose
- Status after paraplegia
- Spina Bifida

Orthopedic indications

- Amputation
- Fracture
- Status after ligament rupture
- Status after joint surgery

Contraindications

- Structural contractures such as:
- Ankylosis
- Fibrosis
- Ossification
- Deformation of muscles and bones
- Poor blood circulation

Dynamic Textile Orthoses

Elements Body

A meticulously crafted range of Made-to-Measure (MTM) medical device class 1 dynamic textile orthoses, designed to meet the stringent requirements of MDR 2017/745. Our garments feature carefully selected fabrics, produced, and certified in accordance with OEKO-TEX standard 100, product class II.

Our textile orthoses leverage the therapeutic benefits of dynamic compression, delivering sensory and proprioceptive feedback that is crucial for the ideal therapeutic outcome. The base material of Elements Body applies targeted compression to the body, simultaneously increasing sensory and proprioceptive feedback and accommodating natural movement. Biomechanical reinforcements are strategically positioned to further influence normal movement, soft tissue dynamics, and joint alignment, fostering stability,

Key Features of Elements Body:

Constant and consistent feedback

Provides sustained sensory and proprioceptive input.

Motor learning and neural integration

Augments the potential for motor learning and neural integration.

External stabilisation, alignment, and resistance

- Improves postural control and proximal stability
- Enhances quality of movement and tone.
- Promotes fluidity of movement and tone management.

Reduction of involuntary movements

Observed to mitigate involuntary movements effectively.

Diaphragmatic support

Provides crucial diaphragmatic support, leading to improved breathing and vocalisation.

Enhanced carer handling and transferring

Facilitates improved handling and transferring by caregivers.

Our specialised garments have demonstrated positive outcomes in the following conditions:

- Cerebral Palsy:** Tailored support for individuals with cerebral palsy.
- Acquired Brain:** Injury Addressing tone management needs post-acquired brain injury.
- Acquired Spinal Cord:** Injury Providing targeted intervention for postural management after spinal cord injury.
- Cerebellar Ataxia:** Tailored support to manage tone challenges associated with cerebellar ataxia.
- Athetosis:** Effective intervention for individuals experiencing involuntary movements.
- Stroke:** Tailored to address tone issues arising post stroke.
- Multiple Sclerosis:** Offering therapeutic solutions for sensory and proprioceptive feedback, stability, and postural management
- Persistent Hypotonia:** Specially designed to provide stability and alignment for individuals with persistent hypotonia.

Training prerequisite: Prior to placing an order for Elements Body, prescribers are mandated to undergo training facilitated by Allard UK. This ensures that those prescribing the garments possess the requisite proficiency to make informed decisions.

Elements Body Trial Lumbar Wrap

The Trial Lumbar Wrap is a clinical assessment aid and evaluation tool to be used in the assessment process for Elements Body. It enables the clinician to evaluate the patient's response to the application of a dynamic textile garment in preparation for a made-to-measure garment. The Trial Lumbar Wrap is intended for short-term use for a maximum of two weeks.

Item No.	Colour	Type	Pelvic Circumference
393460009	Black	XX-Small	50-60 cm

393460013	Black	Large	105-125 cm

Elements Body Trial Sleeve

Designed to be used in the assessment process for Elements Body MTM upper limb garments. It enables the clinician to evaluate the user's response to the application of a dynamic textile garment in preparation for a made to measure upper limb garment. The Trial sleeve is only to be used for an assessment period of 2-4 weeks to assist the clinician in identifying the clinical effectiveness and tolerance prior to the provision of an Elements Body MTM Garment.

Easy On

Easy On is intended to be used as an aid when donning an Elements Body Sleeve. Wearing the product when donning will reduce friction and make it easier to put on the orthosis. Once the Elements Body Sleeve is on, Easy On should then be removed.

Item No.	Model	Size
393570011	Easy on donning aid	Small
393570013	Easy on donning aid	Large

HyMo Textile Orthosis

A meticulously crafted, Made-to-Measure (MTM) textile orthosis designed to address the specific needs of individuals aged 10 and above diagnosed with hypermobility conditions, such as Ehlers Danlos Syndrome. Our clinical focus is on delivering targeted stabilisation and support to the soft tissue and joints, recognising hypermobility as the primary diagnosis. Prescribed by therapists and orthotists, HyMo exemplifies the intersection of clinical precision and therapeutic efficacy. Elevate your approach to hypermobility management with HyMo, where each garment is a testament to our commitment to professional excellence in textile orthotics.

Training prerequisite:

Prior to placing an order for HyMo, prescribers are mandated to undergo training facilitated by Allard UK. This ensures that those prescribing the garments possess the requisite proficiency to make informed decisions.

Suitable for individuals aged 10 and above!

Wrist and Thumb Orthoses

S.O.T Thumb Orthosis

Positions the thumb in an optimal resting position. A Unique Orthotic Solution for Thumb and Palm This orthosis is designed to restrict movement at the CMC and MCP joints of the thumb, support the arches of the hand, whilst positioning the thumb in an optimal position for management of pain, joint stability and soft tissue length, that could lead to mal-alignment or subluxation of the joint.

Features

- The orthosis has an adjustable aluminium core that can easily be shaped to fit individual anatomy.
- The orthosis can be adjusted as the thumb CMC position changes.
- The orthosis can be machine washed with cover attached at 40°C.
- The smooth design makes it an excellent alternative to custom made thumb orthosis.

Intended use

Osteoarthritis*, rheumatoid arthritis, adduction contracture of the thumb, overload injury of the CMC joint.

*OA in CMC region, stages 1-4. At OA in stage 4, the scaphoid is also involved. The thumb support should then be combined with a wrist orthosis. Eaton and Littler Classification of Basilar Thumb Arthritis.

** Relation between MCP width and wrist to fingertip length can vary. Regard the size interval only as a guide.

S.O.T Resting Splint

Many patients who have experienced a stroke, over time may get a variety of complications, such as spasticity, paralysis, pain, loss of sensation, decreased proprioception and oedema of the hand and arm. These complications can cause a reduction of mobility in the hand and eventually contractures may develop, therefore, it is important to start with orthotic treatment, along with hand therapy at an early stage, before spasticity is established, and contractures occur. S.O.T is a smooth, lightweight resting splint that has an aluminium core that allows adjustment to the desired position. The aluminium core is embedded into polyethylene foam and covered with fabric. The brace is delivered in a resting position, this position offers relaxation to the hand and may also give pain relief to the patient, it also provides a good biomechanical position that may reduce the risk of flexor shortening at the wrist and fingers. Patients suffering with rheumatoid pain may benefit from S.O.T, as it prevents the hand from falling into unfavourable painful positions. The orthosis can be adjusted into an alternative resting position.

Prevents or reduces the risk of oedema

Instead of conventional straps over the fingers, hand and arm (that can cause oedema) the S.O.T Resting Splint has a soft elasticated cover, which keeps the hand and arm in place. The pressure-distribution cover, in combination with an optimal position of the wrist and hand reduces the risk of oedema as it facilitates venous return. The material's smooth outer surface, and its low profile allow the orthosis to fit under clothing.

Accessories

A non-elastic wrist strap can be attached to the soft elasticated cover to provide firmer pressure over the wrist (for spasticity) The S.O.T finger dividers prevent skin irritations between the fingers. It also prevents ulnar/radial deviation at the fingers and contributes to a better position. Wedges can be purchased to apply a further stretch of the long finger flexors (Flexor Digitorum Profundis and Superficialis) or they can be positioned to stretch the Intrinsic muscles (Interossei and Lumbricals). The wedges can also be placed to increase the extension of the wrist without reshaping the orthosis.

Intended Use

S.O.T is a resting splint designed for patients with spasticity or paresis of the hand and arm when the objective is to maintain or increase the mobility of the upper limb.

SELECTION®

Allard wrist and thumb supports are made from a material developed exclusively for Allard. Selection® Powernet, the inner textile mesh gives the material its perfect elasticity and recovery for good consistent support. Selection® Air is a thin, soft and 100% air permeable material used in selected parts of the orthosis where textile doesn't impact on function or retain heat, giving a smooth finish. Together Selection® Air and Powernet can mould to anatomical contours that allow unrestricted movement and stability. A perfect fit that is soft inside and durable outside. Elegant with high comfort.

SELECTION® Childrens Thumb

Selection® Thumb orthosis for children is elastic all the way around and the design keeps the thumb in a relaxed and pain free position.

35202 2014	35203 2014	X-Large	Right	> 20 cm

SELECTION® Wrist Soft

SELECTION® Wrist Soft is our wrist support that offers medium stabilization to the wrist and hand. It has a pre-shaped removable rigid stay on the volar side and a less rigid thinner removable stay on the dorsal side. It is low cut to follow the hand's natural bend and well cut around the thumb which allows the thenar muscles to work freely. The two-piece closing system makes the orthosis easy to open and close with one hand and allows adjustment of the width of the forearm. As the lacing comes from the ulnar side, the risk of misalignment of the thumb is reduced. It has an adjustable thumb grip. Due to the construction of the material it is possible to adjust the shape slightly by trimming with scissors. The length of the orthosis is 18cm on the volar side.

SELECTION® Ulnar Deviation

SELECTION® Ulnar Deviation is intended for the management of Ulnar Deviation. Corrects alignment of joints of the fingers to improve extension, strength and function of the hand. Reduces pain and joint stiffness. Ulnar deviation is likely to be a characteristic for those with various forms of inflammatory disease, such as Rheumatoid Arthritis. This may also be used for realignment and stabilization in patients with joint laxity and muscle weakness.

Item No. Left	Item No. Right	Colour	Size	Circumference MCP 2-5

35218 1013	35218 2013	Black	Large	22 - 25 cm

SELECTION® Multiopen

SELECTION® Multiopen is a semi-stable wrist support with double locking function. It can be opened up completely and secured loosely with Velcro and then pulled closed firmly with the lacing system. The patient can choose to either open it completely each time the orthosis is taken on/off or only use the lacing function.

The orthosis is low cut to follow the hand's natural creases and the thenar creases allowing the the muscles to work freely. The two-part lacing and locking in combination with Velcro enables adjustment of the width for a wider forearm. As the lacing is positioned on the ulnar side, the risk of the thumb being positioned incorrectly decreases. The orthosis has an adjustable thumb strap that attaches from the volar side and fastens on the dorsal side.

The components of the fabric make it possible to cut without fraying, using scissors, to shape for optimal fit. Made in an airy and comfortable SELECTION® material with all the functions that this entails.

The orthosis is 22cm in length, i.e. 4cm longer than a SELECTION® Soft 35204. It has an adjustable aluminium stay on the volar side which is removable.

Item No. Left	Item No. Right	Colour	Size	Wrist circumference

SELECTION® Radialis Thumb

The SELECTION® range presents two new products, Radialis Finger and Radialis Thumb. These are sold as separate items to make it possible to combine them as and when required for thumb and finger extension. They have been designed to use for Radial Nerve Palsy, (dropped wrist caused by damage to the Radial Nerve) to assist functional grasp and release whilst the nerve recovers. These are intended to be combined with Selection® Wrist orthosis model numbers 35204, 35205 and 35209.

Item No. Left	Item No. Right	Colour	Size	Measure
35216 1011	35216 2011	Black	Small	3 - 4 cm
35216 1013	35216 2013	Black	Large	5 - 6 cm

Measure: Length joint centre MCP1 – joint centre IP1.

SELECTION® Radialis Finger Section

Radialis Finger component comprises two sections that change to make it easier to put on and adapt to the best fit. The Finger Part is attached to the soft plush material on the dorsal side of the orthosis. Simple to attach and comfortable to use. Can also be combined with Radialis Thumb Section.

Item No. Left	Item No. Right	Colour	Size	Measure
35217 1011	35217 2011	Black	Small	17 - 20 cm

35206 1015	35206 2015	XXLarge	Black	> 23 cm

Each Selection Wrist Support has the new CS-spoon inserted on the palmar side of the orthosis. It is a pre-shaped plastic spoon with flared edges at top and bottom. A soft plastic stay is also incorporated on the dorsal side of the orthosis. Both are removable. The CS-spoon is also available in packs of 10. Item number 35210.

SELECTION® Fingerloop & Fingerloop Sheet

A twin bandage that efficiently holds two fingers or more together, for the stronger finger to assist a weaker one as support, protection and/or for increased range of motion. Can also be used as a static progressive splint for increased range of motion in DIP joint. The bandage is made in 100% durable and quick-drying nylon. Welded with no seams and therefore easy to cut for a personal fit. One or more pieces can be used at the same time. The semi-prepared Fingerloop sheet which is 10 cm wide can easily be trimmed to individual straps in desired width by scissors.

Knee Orthoses

COMBO™

Dynamic Low Profile, Lightweight, Functional Orthotic Solution for the management of genu recurvatum or chronic knee instability, accompanied with footdrop.

- Low profile and lightweight – a KAFO your patients will wear!
- Uprights easily shaped and adjusted to optimum height.
- Modular components allow you to accommodate variances in thigh and calf circumference.
- Easy to don and doff.
- Easily removed when wearer is relaxing (watching TV, etc.).

WARNING:

Weight Limit - 150 kg

Height Limit - 2 m

Use of COMBO with any product other than ToeOFF® or BlueROCKER® is prohibited.

1. Joints: One size
2. Tibia Connector: Generally, select the same size as the ToeOFF/ BlueRocker. However, the next smaller size will “snug” the wings of the ToeOFF/BlueRocker closer to the leg for the extra small calf, and the next larger size may better accommodate a larger calf.
3. Knee Control Component with Popliteal Interface: Take a M-L measurement at the knee (knee width).
4. Thigh Cuff: Take a circumferential measurement at height where thigh cuff is to be located, however, make certain it is not less than 10 cm above the tibial plateau. Take a M-L measurement at same height.
5. Thigh Cuff SOFTKIT™: Same size as thigh cuff.

COMBO can not be assembled to ToeOFF Flow 2 1/2; ToeOFF Short or BlueROCKER Short.

5 Components + ToeOFF® or BlueROCKER® Required to build a Combo

Important

Please complete the order form for COMBO which can be downloaded from our web site. Components of the COMBO require customisation to individual patient. Workshop tools are required for assembly. For first time compilation, please allow approximately 1 ½ hours to customise the components. Allard UK also offers an assembly service. Please contact us about this service. View the assembly video on our web site.

CROSS™ Knee Hyperextension orthosis

Cross™ is a functional combination orthosis with unique one-handed application. It is intended for mild to moderate knee hyperextension due to neuromuscular diseases or other injuries. The brace can be used together with an Allard AFO when knee hyperextension is present together with foot drop.

- Anatomically shaped patella opening with silicone buttress
- Silicone band strategically placed to prevent migration
- Self-contouring Condyle shells
- Adjustable ROM stops:
Flexion: 45°, 60°, 75°, 90°
Extension: 10°, 20°, 30°, 40°
- Hyperextension resistance is easily adjusted with one hand
- Shaped reinforcement stays to provide guidance for patient to correctly align the support.
- Pre-flexed anatomical shape fits the contours of the leg to provide comfortable fit under AFO.

Patient friendly features include thin, breathable lightweight material with an ultra-smooth friction liner with no visible seams.

Supplied with unique Cross™ donning aid which allows for one-hand application, well suited for patients with limited balance to don the orthosis themselves while in a seated position and those patients with hemiplegia or limited hand dexterity.

SELECTION® Knee Patella

This brace is especially designed for treatment of different kinds of patella related conditions. The patella pad can be moved into different positions - medially, laterally or underneath the patella. The brace gives light stabilization and has stainless steel spiral stays on the sides.

Item No.	Size	15 cm below patella	Mid patella	15 cm above patella
35704 0010	XSmall	28 - 31 cm	30 - 33 cm	34 - 39 cm
35704 0011	Small	31 - 34 cm	33 - 36 cm	39 - 43 cm
35704 0012	Medium	34 - 37 cm	36 - 39 cm	43 - 47 cm
35704 0013	Large	37 - 40 cm	39 - 42 cm	47 - 51 cm
35704 0014	XLarge	40 - 43 cm	42 - 46 cm	51 - 56 cm

SELECTION® Knee Minor

Knee Minor is a tube version with stainless steel spiral stays on each side. It gives mild support and good compression. Minor is adjustable on the front of the thigh and on the calf. It also has an anatomically shaped patella opening and silicon "Stay-Up" on the inside to prevent migration.

Item No.	Size	15 cm below patella	Mid patella	15 cm above patella
35700 0010	XSmall	28 - 31 cm	30 - 33 cm	34 - 39 cm

35700 0015	XXLarge	43 - 47 cm	46 - 50 cm	56 - 60 cm

SELECTION® Knee Minor Wrap

Knee Minor Wrap is a "wrap-around-model" with stainless steel spiral stays on each side. It gives mild support and good compression. It has an anatomically shaped patella opening and silicon "Stay-Up" on the inside to prevent migration. Minor Wrap also comes in PLUS sizes to accommodate larger thigh circumferences.

Item No.	Size	15 cm below patella	Mid patella	15 cm above patella

SELECTION® Knee Optima

This model is a "pull-on" version. It combines a range of motion control with medial/lateral stability and compressive support for knee instability. It also give assistance in reducing hyperextension, adding M-L stability and can assist in A-P instability. It has an anatomically shaped patella opening and silicon "Stay-Up" on the inside to prevent migration.

Item No.	Size	15 cm below patella	Mid patella	15 cm above patella

ELEMENT Stretch-UP Sock

This simple sock is designed to keep tension on the tissue (plantar fascia) to help it heal in a stretched position at night or at rest. Because of this many users find less morning pain in the heel area.

Item No.	Size	Calf circumference
34108 0011	Small	< 20 cm
34108 0012	Medium	20 - 40 cm
34108 0013	Large	> 40 cm

C.H.E.C.K.™

Comfortable Hyper-Extension Control Knee

Stainless Steel with Condyle Pad

Weight: 640 grams. Offers increased M-L and AP stability and includes condylar pads for closer fit.

Comfortable Hyperextension Control

Longer uprights (when compared to the Swedish Knee Cage) reduce the amount of pressure required on the femur and tibia to control hyperextension, making the orthosis better tolerated by the patient.

Effortless Motion Joint

Dual axis joints allow for full knee flexion and allow each of the four uprights to move independently over each other, from extension to flexion, enabling the orthosis to follow the natural movement of the leg and prevent downward migration.

Low profile

Low profile hinges with slim uprights that are easily shaped to fit the contours of the leg to create an orthosis that becomes virtually unnoticeable under clothing.

Comfortable Frame Suspension System & Tissue Interface

Made of synthetic leather laminated with polyurethane foam and brushed polyester tricot. These unique pads provide a soft interface between soft tissue and the orthosis.

Easy to Don and Doff

D-loops are available for patients with limited use of their hands to make the application of the device easier. Straps are attached to the suspension sleeves eliminating confusion of which strap goes where. After initial fitting, wearer just closes or opens one side only of the front straps for simple application and removal.

One Size

Posterior upright connection bar adjusts to fit knee widths from 9 to 13 cm.

Indications

Genu recurvatum, Unstable knee caused by laxity of the ligaments, Mild valgus instability, Mild varus instability, Neurologic function impairment (post C.V.A.).

Contraindications

Not suitable for sports activities

Item No.	Description	Size	Knee Width	Total length
28652 0000	C.H.E.C.K. Stainless Steel	One Size	9 - 13 cm	45 cm

Important: Loctite®, not supplied with the product, must be applied to all screws at the time of fitting.

Our range of Osteoarthritis Orthoses

In collaboration with VQ Orthocare we offer a range of unique knee orthoses for the relief of symptoms caused by Osteoarthritis (OA). Our wide range of varied high quality OA knee braces provide individualized patient centered solutions with different levels of support and control.

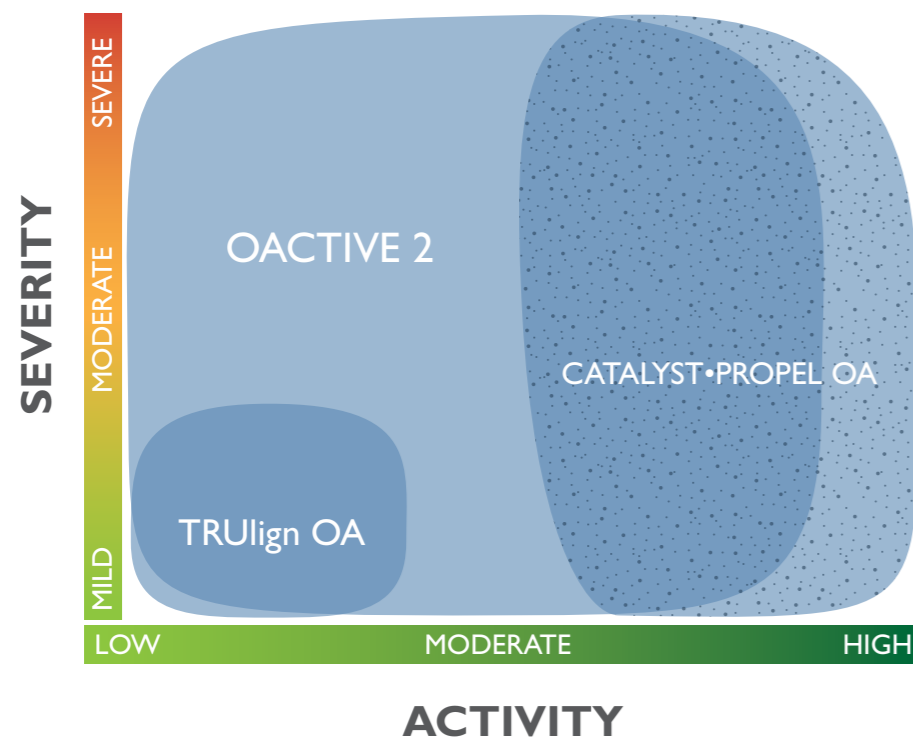

OActive®2

Catalyst-Propel™ OA

TRUalign OA™

The choice of knee orthosis for the management of osteoarthritis is primarily based on the degree of deterioration and the patient's activity level. Factors to consider when prescribing a brace for your patient should include your orthotic goal, the patient's experience and any additional soft tissue damage.

OActive®2 is suitable for most patients regardless of activity level or degree of injury.

Q-hinge technology

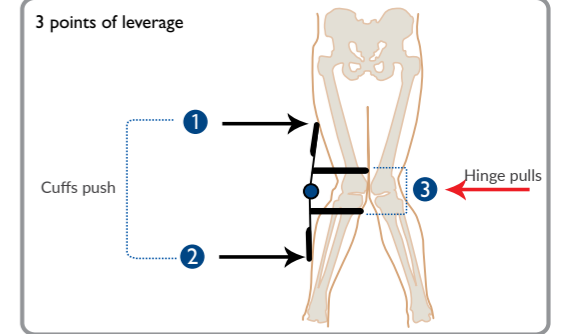

The Q-hinge changes the overall valgus/varus angle of the orthosis for optimal correction. This provides the opportunity to fine-tune the correction forces during the fitting process based on the patient's pathology and tolerance for a clinical effect that meets the requirements.

OACTIVE®2 FOR MEDIAL OA

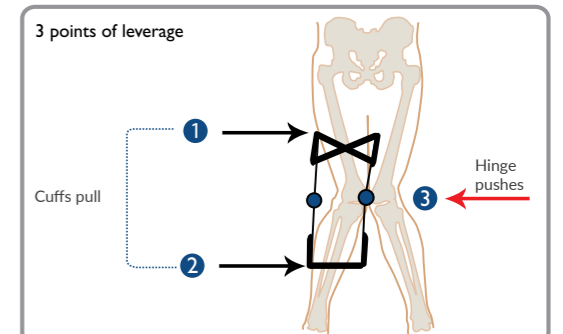

OACTIVE®2 FOR LATERAL OA

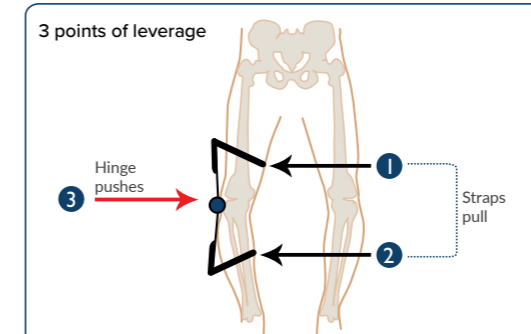

CATALYST PROPEL FOR MEDIAL OA

CATALYST PROPEL FOR LATERAL OA

TRULIGN™ OA FOR MEDIAL OA

TRULIGN™ OA FOR LATERAL OA

Push button

Set-Fit Buckle

OACTIVE®2

The OActive® 2 knee orthosis for the treatment of knee Osteoarthritis is made from aluminium, is lightweight and flexible. It is available in one size. The simple low-profile design makes it less visible under clothing. The brace has smart innovative buckles to facilitate donning and doffing.

Available with two hinge options:

- Standard hinge for patients weighing under 136Kgs
- Heavy Duty hinge for patients weighing over 136Kgs

The unique Q-joint adjusts both clockwise and counterclockwise to achieve the desired relief which can also be set to limit the range of motion for extension and flexion independently. The orthosis can also be sent for free motion. Supplied with 5° stop installed. There are various extension and flexion stops provided with each orthosis.

OActive® 2 is available in the following options:

- Suspension Wrap with either Push Button or Set Fit Buckles
- Tibia Cuff with either Push Button or Set Fit Buckles

OActive® 2 with Suspension Wrap can be used in two ways. Either by placing the Suspension Wrap over the lower part of the orthosis or alternatively by placing it between the legs and the orthosis. Both options prevent the brace from migrating on the leg.

OActive® 2 with heat mouldable Tibia Cuff with Exothermic Heat Pack for easy custom fitting and prevention of distal migration for a better fit.

Indications

Mild to severe uncompartimentalised Osteoarthritis.

Suspension Sleeve Under brace

Suspension Sleeve Over brace

TRULIGN OA

The TRUalign OA™ is a unilateral knee orthosis for the management of mild to moderate unilateral knee osteoarthritis. The orthosis has a single-sided joint designed into a user friendly 'wrap around' orthosis with Push Buttons to facilitate easy donning and doffing.

Anatomically designed with high stretch, airy material for a compression and a comfortable fit. The Q-joint technology provides the patient with symptom relief from the 3-point pressure principle known to reduce pressure and pain in knee Osteoarthritis.

Features and Benefits

Increased patient compliance as it is:

- Easy to apply.
- Breathable, comfortable and conforms to the anatomy.
- Q-hinge angular adjustment delivers optimized 3-point leverage for maximum relief.

Indications:

Unilateral medial or lateral, mild to moderate knee Osteoarthritis.

Item No. Left	Item No. Right	Description	Size	Circumference 15cm above Patella	Circumference 15cm below Patella

550181013	550182013	Trulign OA	Large / X-Large	65-81cm	48-64cm

Catalyst Propel OA

The Catalyst Propel OA™, a four-point knee orthosis features a unique Active Thigh Cuff™ (ATC) solution on the front of the thigh which is flexible and strong for the ultimate suspension. The orthosis provides protection and comfort by moving with the muscles. With a strong but low-profile aluminium frame of the highest quality.

The Q-joint of the orthosis is adjusted clockwise or counterclockwise to achieve the desired relief. Start with the brace in the neutral position, with knee bent at 90° and turn 1/8th of a turn at a time to adjust the relief. Various flexion and extension stop provided with each brace. The orthosis can also be set up to limit the range of motion for extension and flexion independently as well as set for free motion.

Indications:

Management of mild to severe unilateral knee Osteoarthritis in combination with knee instability or after injury to reduce the load on the joint.

Boston Brace

Introduction

Allard Support UK Ltd manufactures and supplies the full range of Original Boston Brace products, as we have done since 1995.

The Boston Bracing system was conceived in Boston's Children's Hospital in 1972 and subsequently developed as a cooperative venture between Bill Miller CPO and Dr John Hall. This same Boston Brace system is widely used throughout the world and is still regarded as the preferred treatment protocol for the conservative treatment of Idiopathic Scoliosis. Over the years, other braces have emerged which exhibit similar shapes and purposes and the term "Boston Brace" has often been applied to them. However, none of these braces have managed to repeat the success of the Original Boston Brace and none can be compared in terms of the volume of medical based evidence available to support its effectiveness.

Our product Range has grown over the years and includes:

- Boston Scoliosis Brace
- Boston Overlap Brace
- Boston Soft Body Jacket
- Boston Lite
- Custom Spinal Orthosis to Measurement, Cast or Scan
- Boston Body Jacket
- Boston Soft AFO
- Boston Hip Abduction Brace
- Various Accessories.

Our Services

In addition to the supply of our standard Boston product range, our central fabrication capability (15,000 ft²) allows us to offer a wide range of services and benefits to your clinic or workshop and most importantly, your patient, with regard to the manufacture and supply of a wide range of Custom Made Spinal Orthotic products, finished to your specifications and ready for fitting to the patient.

Custom/Bespoke Orthosis

We will manufacture the spinal orthosis you require to either measurement, cast or modified scan. The formats we can accept are .stl, .cpxp and Vorum Spectra Scan.

The orthosis are available in a variety of material types, thicknesses and colour transfer patterns. Technical advise on possible options that may enhance the integrity and performance of your orthosis, taking into account your specific patient needs/pathology.

The orthosis can be fully finished (to first fitting stage), trimmed to size, buffed, with fastenings attached, etc. Our extensive library of body molds allows us the ability to manufacture these products more efficiently and faster than anyone in the industry, thus providing a very cost effective option for our customers.

Central Fabrication- Benefits to You

- Access to 30 years experience in spinal orthotic design and manufacture.
- Fully finished Orthosis.
- Cost Effective Central Fabrication.
- Fast & Efficient delivery service.
- Quality products and materials, manufactured in an ISO9001:2015 certified environment.
- Products shipped directly to your clinic/hospital.

The Original Boston Scoliosis Brace

The original Boston Brace system for the non-operative treatment of idiopathic scoliosis, utilises a prefabricated, standardised symmetrical module chosen on the basis of the patients physical dimensions. The brace is manufactured from polypropylene and lined with foam. The Boston Brace system is still the preferred choice in the non-operative treatment of scoliosis.

Indications

Idiopathic Scoliosis

Benefits

- Proven System, 30 stock sizes
- Available in 15° and 0° lordosis
- Custom made to measurements, cast or scan.

Brace / Curve Types

- Lumbar curves – Apex L1 and below
- Thoracic /Double Curves – Apex up to T6
- Thoraco – Lumbar curves – Apex T12 –L1
- Low Thoracic Curves – Apex T10 – T11

Standard Material

- Orthopaedic grade copolymer
- Hypo-allergenic Polyethylene foam liner

Made-to-Measure form on page 86.
Standard size chart on page 88.

Boston Night Brace

Our many years of experience and knowledge have taught us that not all patients will be suitable for the original Boston Brace. For patients with smaller magnitude curves and perhaps a dramatic physical or psychological reaction to wearing a full time brace, there is a need to have an alternative orthosis to offer. For this reason, we have developed the Boston Scoliosis Night Brace to give the orthotist and clinician an alternative orthosis for use with a certain patient group who exhibit some of the characteristics mentioned above.

Principles

The Boston Scoliosis Night Brace is designed to be worn only at night, during sleep. It is molded to conform to the patient's body while he/she is bent towards the convexity of the curve, thus 'over-correcting' the curve during the eight hours it is worn. The objective of the Boston Scoliosis Night Brace is to biomechanically correct the scoliosis via stabilizing, lateral shift and unbending forces.

Indications

Idiopathic Scoliosis

Benefits/Features

The Boston Scoliosis Night Brace utilises several key design features which we feel will ultimately result in increased patient comfort and adjustability:

- **Extra Comfort**
Additional layers of inner foam liner which provide increased patient comfort during the wearing periods.
- **Removable Internal Liner**
Can be easily removed from the outer plastic shell in order to allow for ease of cleaning and adjustment.
- **Reduced Edge Pressure**
The internal foam liner overhangs the external plastic shell to eliminate edge pressure (from the edge of the plastic shell) which is evident on most other braces.

Standard Material

- Orthopaedic grade co-polymer
- Hypo-allergenic Polyethylene foam liner

Made-to-Measure form on page 86. S
tandard size chart on page 88.

The Boston Overlap Brace

The original Boston Overlap Brace (BOB) is an anterior opening LSO thermoplastic brace specifically designed for patients suffering from chronic or temporary low back pain. The prefabricated modules are available in 15° and 0° of Lordosis. The BOB can be supplied unlined or lined with a 3.5mm thermofoam lining. In addition to 20 standard stock sizes, the BOB can be manufactured to cast or measurement.

Indications

Mechanical back pain, Discogenic low back pain, Compression fractures, Spondylolysis, Spondylolisthesis, Osteoporosis, Spinal arthrosis, Spinal stenosis, Pre and Post-operative care

Benefits / Features

- 20 Stock Sizes
- Custom to Cast or Measurement
- Lightweight
- Sturdy yet comfortable
- For treatment of sports injuries
- Easily trimmed to size

Options

Available as Soft BOB and with removable or permanent Stays.

Standard Material

- 3 mm Low Density Polyethylene,
- 3 mm Polyethylene foam,
- Front steel closure

Made-to-Measure form on page 86.
Standard size chart on page 88.

Boston Soft Body Jacket

The original Boston Soft Body Jacket (BSBJ) is a spinal orthosis designed to make control more comfortable for patients who cannot tolerate rigid compression. The BSBJ remains flexible while providing support with strategically placed stays (reinforcements). Alternatively, the product can be manufactured with either Internal or External polypropylene frame, where slightly more rigidity is required.

Indications

Neuromuscular Scoliosis, Seating and Positioning (Posture Control), Myelomeningocele, Cerebral Palsy, Muscular Dystrophy

Benefits / Features

- 30 Stock Sizes,
- Custom to Measurement or Cast
- Separate vertical stays allow increased diaphragm expansion for improved respiration
- Reduced skin pressure and related problems
- Improved positioning and seating stability
- Especially beneficial for children and non surgical candidates
- Light and flexible
- Easy to trim
- Supplied with fastening straps

Options

Removable Stays, Permanent Stays, Internal Frame, External Frame, Anterior/Posterior/Bi-valve opening, Colour options.

Standard Material

- 3 mm Firm Polyethylene foam outside
- Co-polymer stays
- Copolymer frame
- 4.5 mm Soft Polyethylene foam inside

Boston LITE™

Based on the concept of the Boston Soft Body Jacket the Boston Lite™ is thinner and more ventilated but with the same proven stability.

By merging the two materials and using certain shapes it is easier to accommodate the brace to the user's needs for ventilation and feeding tubes.

The lining is a separate piece made from a 3D-spacer material. This material provides comfort by absorbing moisture and increases ventilation to keep the skin more cooler and drier. The spacer also works as a pressure divider towards the body. The liner is used instead of a traditional T-shirt.

Low profile buckles have been developed that contributes to a more low profile design. *Boston LITE is only available with a posterior opening at this time.*

Indications

Neuromuscular scoliosis. Trunk control and postoperative support.

Boston Body Jacket

The Boston Body Jacket is designed to immobilise spinal patients from neck to hips. This custom TLSO promotes rapid fusion for shorter hospital stays and is therefore the ideal post-operative brace for your patients. Choose from different materials and openings.

Indications

Post-operative, Compression Fractures, Spinal Immobilization.

Benefits / Features

- 12 Bi-valve Stock sizes
- Custom by cast or measurements
- Anterior / Posterior / Lateral / Bi-Valve Openings
- TLSO / LSO (Lumbar Sacral Orthosis)
- Low Density Polyethylene or Polypropylene
- Can be finished to first fitting stage.

Standard Material

- Low Density Polyethylene
- Hypo-allergenic
- Polyethylene foam liner

Boston Hip Abduction Brace

The Boston Hip Abduction Brace is a lightweight paediatric orthosis with a frame that is manufactured from sturdy Polypropylene and a closed cell foam liner which does not retain moisture. This orthosis maintains concentric reduction of hips in patients with displasia. The product can replace spica casts and harnesses for certain developmental dysplasia patients.

Indications

Congenital Hip dislocation, Hip Displasia, Cerebral Palsy

Benefits / Features

- Easy to apply
- Lightweight
- Convenient for nappy change
- Closed cell foam liner does not absorb moisture
- Easily cleaned

Standard Material

- High Density Polyethylene
- Hypo-allergenic Polyethylene foam liner

Boston Brace Vests

Standard Boston T

The Boston T is the perfect mate to wear under your Boston Brace. This white protective round neck body sock with single axilla flap is superior to a regular vest for cushioning. It stretches more than 150% to ensure a wrinkle-free fit under the Boston Brace. It is made from 95.6% CoolMax® and 4.4% Lycra®. CoolMax® includes an effective fibre-based moisture management system which moves perspiration away from the body and through the fabric where it evaporates quickly, allowing the wearer to feel cooler and more comfortable.

Item No.	Description	Specification	Size	Chest Circumference
1BP2BVSL	STANDARD BOSTON T	SINGLE AXILLA FLAP	SMALL	40-61cm
1BP2BVML	STANDARD BOSTON T	SINGLE AXILLA FLAP	MEDIUM	61-81cm
1BP2BVLL	STANDARD BOSTON T	SINGLE AXILLA FLAP	LARGE	81-101cm
1BP2BVXX	STANDARD BOSTON T	SINGLE AXILLA FLAP	X-LARGE	101-122cm

X-Static Boston T

The X-Static Boston T has the same benefits as the Standard T and is also available in double axilla flap. The material content in the single axilla flap comprises 49% polyester, 46.5% Nylon, 5% X-Static® and 2% Lycra®. X-Static® fibres help transport moisture away from the skin and prevent odour. It also has thermal and anti-static properties to keep you cool and comfortable. The double axilla flap comprises 95.6% Polyester/X-Static® blend and 4.4% Lycra®.

Boston Brace Transfer Single

Allard Support UK Ltd - General Terms and Conditions of Sale

Prices

Prices are effective from 1 January 2025. All Prices exclude VAT and delivery charges.

Payment Terms

Standard terms are net 30 days from Invoice date.

Overdue accounts are subject to a charge of 1.5% interest on the unpaid balance.

Delivery

It is our aim to despatch all stock size orders received by 2pm on the same day. If for any reason we are unable to meet that aim, you will be contacted. Customised orders will be despatched in accordance with the manufacturing lead time of the product. This will be communicated to you on receipt of the order.

Returns

- Customised items are not returnable for exchange or credit.
- Not-for-Resale items are not returnable for exchange or credit.
- Stock items more than 2 months old are not returnable.
- Items may not be returned without a Return Authorisation Number. Please call us in order to receive a Return Authorisation Number prior to shipping the product.
- Stock items returned for credit (cost of goods only) will be charged a 5% re-stocking fee. Any such returned goods must be unmarked and undamaged in any way.
- Incorrectly supplied items will be credited in full (cost of goods, plus initial delivery charges to customer, plus return charges to Allard UK Ltd – subject to verification of such return charges).
- Defective goods will be credited in full (cost of goods, plus initial delivery charges to customer, plus return charges to Allard UK Ltd – subject to verification of such charges) OR replaced (and credit for cost of return charges to Allard UK Ltd – subject to verification of such return charges). Allard UK will examine all returned “defective” items to ascertain the validity of such claims. The customer will be notified of outcome of such examination and the applicable credit or replacement within a reasonable period of time.

ALLARD AFO Warranty

Allard UK return’s policy for Allard AFO products assumes that fitting has been done correctly, adjustments have been carried out according to Professional Instructions supplied and the Patient Instruction has been reviewed with the patient. The Patient Instructions should be given to the patient or the caregiver to take home. Our return policy is that we grant warranty for defects in material and workmanship as indicated by specific products listed below:

All ALLARD AFOs (except Custom)

Allard UK will provide at no charge to the provider, a replacement product of equal value for any Allard AFO.

- Choice of specific product, and product size is at the discretion of the provider.
- Replacement is limited to two orthoses for the same patient that is returned within one year from date of the initial fitting of the Allard AFO.

All Allard Custom AFO

Allard UK grants warranty for defects in material and workmanship and will provide at no charge to the provider a replacement Allard AFO Custom of equal value, provided the replacement does not require change in position of the strut or change in heel height (unless the change is required due to a fabrication error). There will be an additional charge if the replacement requires a change in properties not specified in the original order, for example changes in A-P and/or M-L stiffness. Replacement is limited to one orthosis for the same wearer that is returned within one year from date of initial fitting. The product should be inspected on receipt and if the AFO does not meet order requirements the provider should contact Allard UK immediately.

KiddieFLOW™, KiddieGAIT®, KiddeROCKER®

Allard UK will provide at no charge to the provider, a replacement product of equal value for either Allard AFO listed above.

- Choice of specific product, as listed above is at the discretion of the provider.
- Replacement is limited to one orthosis for the same patient that is returned within six months from date of the initial fitting of the Allard AFO.

IMPORTANT

- To get a replacement you need to contact Allard UK Customer Support and provide us with the Serial Number of the product. The product must be sent back to Allard UK together with our Return form.
- This warranty does not cover change in function or damage done by tools, application of heat, or excessive bending/flexing back and forth of the wings.
- Replacement does not include fitting, modification or other provider costs.

Support for Better Life

Everyone should be able to live their life to the fullest, regardless of their mobility challenges. With innovative solutions developed in close collaboration with healthcare professionals and patients, we strive to provide Support for Better Life.
